

Product Lead

Glamorous AI, as part of X-Chem, are building the first artificial intelligence powered platform for drug discovery. By integrating large data, domain expertise and AI we believe we can deliver a transformation in how we discover, analyse and test drug candidates.

We have a multi-disciplinary team of experts in AI and chemistry who want to make a difference by building the best tools and technologies to advance medicine discovery. Our team in London has some of the leaders in AI in biotech and has won several awards for their research and contributions to the healthcare industry.

We have exciting growth plans and are looking for a skilled Product Lead to join us on our mission!

If you are a mission-driven individual who wants to make an impact and who believes in data and AI, then this is for you!

The Role:

Working alongside our machine learning researchers, data scientists and engineers, you'll help us build and scale our state-of-the-art machine learning platform to support our clients.

Responsibilities:

- Product launch through requirements, development and commercialisation.
- Maintain close relationships with the sales and technical team through training and active participation in the sales process, including customer visits, participating with pricing tactics and customer support.
- Communicate with internal and external stakeholders.
- Coordinate and align product development with cross-functional teams (software engineering, ML researcher, sales and BD, product design)
- Own, prioritise and promote the feature requests from engineers and data scientists to improve the quality of our product.
- Work with the R&D team, recommend new product ideas and/or current product positioning.
- Work with the senior management team to develop the product and service portfolio.
- Communicate technical problems and solutions clearly to all levels and roles across the company.
- Determine customers' needs and desires by specifying the research needed to obtain market information.
- Assess market competition by comparing the company's product to competitors' products and help shape thinking and messaging of USPs.
- Prepare short-term and long-term product plans and special reports and analyses.
- Maintain and develop the roadmap and lifecycle management for the platform.

Required Skills:

- Master's degree in a scientific field
- Minimum 4 years' experience in software product management
- In-depth technical understanding of product portfolio, including the customer workflow and requirements
- Experience working with Pharma and biotech
- Ability to work with teams across the global and cultural differences
- Self-starter with the ability to create and execute plans with minimal supervision
- Strong project management and planning skills, comfortable making decisions and embracing changes
- Outcome orientated, organised and proactive
- Strong scientific and business acumen, with a demonstrated history of managing new and fast-growing products or services
- Excellent communication skills, both written and verbal

We Offer:

- Talented, motivated and interesting co-workers.
- Intellectual challenge solving meaningful problems.
- We organise ourselves in groups of small teams and there is plenty of opportunity for a high degree of ownership over different areas of the product, and you will be directly exposed to all areas of the business.
- Your voice will always be heard. What you do or say counts.
- We are a cross-disciplinary team and come from all backgrounds and countries.
- Competitive salary and benefits.
- Flexibility around remote working.

We believe that diversity makes for innovative, exceptional teams. X-Chem is an equal opportunity employer, committed to addressing the diversity and inclusion problem in the tech industry. That starts with making sure we have a diverse team where everyone feels at home and can contribute as an equal.
