

Product Lead

When massive data meets AI, magic can happen. We are combining two of perhaps the most exciting technologies of this century to bring medicines to patients faster. DNA-encoded libraries meet artificial intelligence to transform how we discover and optimise molecules for preclinical drug discovery. By joining us, you get access to one of the largest, cleanest libraries for hit identification and you get a unique chance to explore how we build novel ML tools to mine our rich libraries.

If you are a mission-driven individual who wants to make an impact and who believes in data and AI, then this is for you!

X-Chem has a multi-disciplinary team of experts in AI and chemistry who want to make a difference by building the best tools and technologies to advance medicine discovery. Our team in London has some of the leaders in AI in biotech and is building the Data-powered AI-first platform for drug discovery.

We have exciting growth plans, and are looking for a skilled Product Lead to join us on our mission!

The Role:

Working alongside our machine learning, data scientists and engineers, you'll help us build and scale our state-of-the-art machine learning platform to support our clients.

Responsibilities:

- Champion successful launches through requirements, development and commercialisation. Maintain close relationships with the sales and technical team through training and active participation in the sales process, including customer visits, participating with pricing tactics and customer support.
- Service as product champion with internal and external stakeholders.
- Coordinate and align with cross-functional teams (software engineering, ML researcher, sales and BD, product design), leverage strong leadership, planning, communication and collaboration skills.
- Owns, prioritises and promotes the feature requests from engineers and data scientists to improve the quality of our platform.
- Working with the R&D team, recommends new product ideas and/or current product positioning or packaging changes.
- Working with the senior management team to develop the product and service portfolio.
- Communicate technical problems and solutions clearly to all levels and roles across the company.
- Determines customers' needs and desires by specifying the research needed to obtain market information.
- Assesses market competition by comparing the company's product to competitors' products and helps shape thinking and messaging of USPs.
- Preparing short-term and long-term product plans and special reports and analyses.
- Maintain and develop the roadmap and lifecycle management for the platform.

Required Skills:

- Master's in scientific field
- Minimum 4 years in software product management experience.
- In-depth technical understanding of product portfolio, including the customer workflow and requirements.
- Expertise in software for bioinformatics, biology, genomics or a related field
- Experience working with Pharma and biotechs
- Ability to work with teams across the global and cultural differences.
- Self-starter with the ability to create and execute plans with minimal supervision.
- Strong project management and planning skills, comfortable making decisions and embracing changes.
- Outcome orientation and a strong desire to plan to measure the success of initiatives.
- Strong scientific and business acumen, with a demonstrated history of managing new and fast-growing products or services
- Excellent communication skills, both written and verbal

We Offer:

- Talented, motivated and interesting co-workers.
- Intellectual challenge solving meaningful problems.
- We organise ourselves in groups of small teams and there is plenty of opportunity for a high degree of ownership over different areas of the product, and you will be directly exposed to all areas of the business.
- Your voice will always be heard. What you do or say counts.
- We are a cross-disciplinary team and come from all backgrounds and countries.
- Monthly social activities.
- Competitive salary and benefits.
- Flexibility around remote working.

We believe that diversity makes for innovative, exceptional teams. X-Chem is an equal opportunity employer, committed to addressing the diversity and inclusion problem in the tech industry. That starts with making sure we have a diverse team where everyone feels at home and can contribute as an equal.
